

Undergraduate Programs

Build on your skills and specialties to start a new career

Wayne State University offers more than 120 undergraduate programs, provides credit for prior learning in specific areas, helps to arrange the testing you need and works with you to maintain your grades. Our programs are designed to place you in a new position as quickly as possible or accommodate the work schedule you currently have. Apply at www.admissions.wayne.edu.

Computer Science

According to the US Department of Commerce, information technology is a prime area for substantial growth over the next decade in science and engineering. The bachelor of arts program in information systems technology prepares you for a challenging workplace with an enhanced knowledge of business applications. The program is designed to give you fundamental knowledge of computer science with system design and business administration.

Specialization in computer science is provided in our bachelor of arts, bachelor of science and postbachelor certificate programs. Specific areas of emphasis include computer security, networking, database management, software engineering, artificial intelligence, computer gaming and more. These specializations allow you to develop an area of expertise in addition to fundamental concepts in computer science. Co-op and internship opportunities also are available.

Education

The College of Education offers Bachelor of Arts and Bachelor of Science degrees in a variety of fields. In addition, our Career and Technical Education Teacher Certification Program provides specializations in Business Education, Health Occupations and Trade and Industry to expand your existing skills and experience.

Engineering

The College of Engineering at Wayne State University has been a leader in providing engineers who live and practice in Michigan, and we envision a bright future for Michigan as the continuing capitol of engineering in the United States. As market forces shift, however, engineers need to move into new areas; our programs in three areas provide this new focus.

Our Engineering Technology Division is prepared to immediately accept individuals with a community college associate's degree to upgrade your education in two years to the BS level. We are working with community colleges around the state to create a 2+2 undergraduate program in alternative energy technology that will provide technical level skills at the community college with the potential to upgrade to a BS degree.
